## About Us

Payazexport – When Stone Becomes a Narrator of Grandeur and Authenticity!

Imagine a building where, in every corner, the spirit of nature is alive; a place where stones, beyond their strength, narrate history, art, and authenticity. This embodies the signature of Payazexport: a fusion of nature’s magnificence with unparalleled craftsmanship in the stone industry.

As a symbol of credibility in the natural stone supply and export sector, we are dedicated to providing products of exceptional quality that are environmentally responsible, adhering to stringent environmental standards and leveraging advanced technologies. Commitment, quality, and sustainability are the three fundamental and inseparable principles of Payaz’s philosophy.

From initial consultation to after-sales service, we offer a comprehensive and unique partnership tailored for you.

Choosing the right stone is the driving force for transformation and beauty in your project’s identity.

Partner with us to infuse your designs with the grandeur, authenticity, and unparalleled artistry of nature.

## Travertine Stone: Beauty and Durability in Architecture

Travertine is a stunning natural stone formed from hot spring sediment, featuring a range of colors from beige to chocolate. Its durability and weather resistance make it suitable for various applications, though it requires special care due to its high porosity. Choosing travertine enhances aesthetic appeal and contributes to environmental sustainability.

**Red Travertine** from Azarshahr, with its natural and attractive colors ranging from light to dark red, adds a unique touch to construction projects. Known for its high resistance to environmental conditions and porous texture, it offers easy installation and is an ideal choice for exterior facades. Additionally, its lighter weight reduces stress on structures and enhances design flexibility.

**Traonyx stone**, a combination of travertine and marble, is popular in interior design due to its beauty and light-transmitting capability. With low porosity and high moisture resistance, it is suitable for humid spaces like bathrooms and kitchens. Additionally, its wide range of colors allows it to blend well with various decor styles.

## Karmania Traonyx

Karmania Traonyx is a distinctive metamorphic sedimentary stone known for its colorful veining and semi-transparent texture, making it suitable for decorative uses. Its durability and high polishing capability allow for various applications, including facades, flooring, countertops, and decorative elements, offering beauty and resilience for both modern and classic designs.

## A Natural Gem in Interior Design

Onyx is a highly sought-after decorative stone, known for its grandeur and elegant appearance in architecture and interior design. Formed from limestone through metamorphosis, its lustrous surface and unique veining enhance the beauty and brightness of spaces. Incorporating Onyx into flooring and walls adds a luxurious touch, showcasing its unparalleled diversity, especially

## Golden White Onyx

Golden White Onyx is a valuable Iranian stone known for its unique golden veining and polished surface that beautifully reflects light. Its durability and insulation properties make it ideal for various applications, including wall coverings, flooring, countertops, and decorative elements, enhancing both modern and classic designs with a touch of luxury.

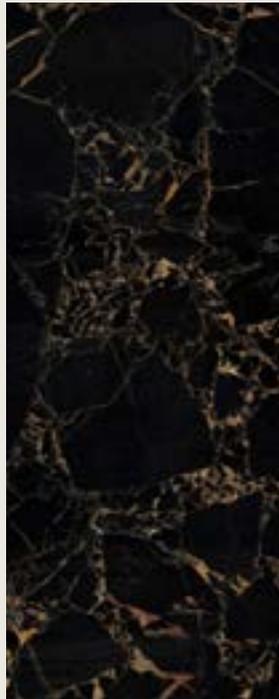

## The Artful Beauty of Nature

Marble-like Onyx is a cherished building material known for its natural beauty and unique characteristics in design. Formed from limestone rich in minerals, it showcases a stunning variety of colors and patterns, including white, gray, black, red, pink, and green. Its polished surface enhances spaces, making it ideal for flooring, wall coverings, and furniture, creating a beautiful and durable environment.

## Characteristics of Rosemajestic Marble

Rosemajestic Marble is a reddish-brown stone with irregular white streaks of calcium carbonate, enhancing its strength and beauty. Available in various finishes and sizes, it is ideal for interior decoration, commercial spaces, and public areas, making it a versatile choice for modern and

# Panda White marble

Porcelain stone, sometimes called crystal stone, is a type of metamorphic rock formed by high pressure and temperature. This stone is usually white in color and sometimes has gray or gray veins. These veins are due to the presence of materials such as hematite and quartz in the stone, which not only add to the beauty of the stone, but also increase its resistance.

## Persian Eskato Crystal Marble

Persian Eskato Crystal Marble is a beautiful and unique stone from Lorestan Province, known for its striking white background with gray and cream veins. It offers high durability, excellent polishability, minimal water absorption, and design versatility, making it ideal for luxury projects and providing great value compared to other decorative stones.

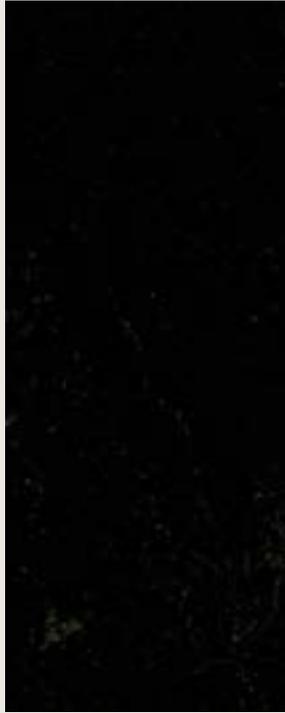

## Granite: A Stone with Tales from the Depths of the Earth

Granite is a remarkable stone formed from cooling magma, known for its exceptional durability, vibrant colors, and unique patterns. Ideal for high-traffic areas like kitchens and hallways, it offers both resilience against pressure and weather changes and a sleek, modern aesthetic. Choosing granite allows for creative combinations with other materials, adding both beauty and functionality to any space

## Costa Esmeralda

Costa Esmeralda granite is a beautiful stone known for its unique color with distinct flecks and patterns, making it easy to combine with other colors. Its durability against scratching, heat, and moisture makes it suitable for use in facades, tables, landscaping, and outdoor surfaces, making it a popular choice for construction and decoration projects.

**Sandstone**, available in diverse colors like cream, gray, and brown, has become a popular choice in interior design. Its rough and textured surface sets it apart, but its high absorbency makes it unsuitable for humid areas. Additionally, it has limited polishability and is mostly found in chiseled, leathered, and guillotine finishes.

Brown sand stone

Wood Sand Stone I

Wood Sand Stone II

Wood Sand Stone III

**Wood Sandstone:** This type of stone has gained popularity for its beautiful and natural resemblance to wood. Its captivating colors primarily range from brown to mustard, with dark lines across its surface reminiscent of stunning wood patterns. These characteristics make it an ideal choice for both interior and exterior spaces.
